

Simply
BOLD

As you browse through the pages of design magazines, you will see many common threads when it comes to kitchen design. Homeowners are looking for custom pieces, bold colors, plenty of texture, functionality over aesthetics and sustainability in their kitchen designs and this project embraced all of those desires!

The kitchen needed to serve both a baker and a chef so functionality and traffic flow were key ingredients in the design. Lighting plays an important part in this with layered lighting on strategically placed dimmers to allow for both functionality and ambience as needed. A door was removed to allow for better traffic flow and to help save valuable workspace, the wall oven was installed below counter height. Careful planning ensured that this small kitchen could accommodate both of the homeowners' lifestyles with ease.

Once functionality had been established in the design, Designer Yvonne Crezel turned to aesthetics to create a kitchen that was both easy to use and a visual delight as well! Taking a bold departure from the ubiquitous all-white kitchen, Yvonne selected bold dark green cabinets accented with metallic hardware. The Ivybridge Cambria Quartz countertops add an elegant finish to the space. To keep the look simple and clean, the quartz extends up the backsplash instead of introducing additional elements to the design.

White oak floors complement the other aspects of the design while also bringing warmth and texture to the space. Careful selection of materials allowed Yvonne to create a space that is both bold and dramatic and yet simple and inviting at the same time!

Design Spotlight
 We love this pet feeding station
 for Mack, the family dog,
 that seamlessly blends into the
 design and features its own
 task lighting
